

GravityZone Email Security

Stop email-based threats before they enter the network

Email is the number one attack vector. It only takes one wrong click from a user to compromise an entire network. Businesses rely on email to get their jobs done, and so it is essential for Managed Service Providers (MSPs) to protect their customers' email with multiple layers of protection. A professional email security solution goes beyond traditional AV and anti-spam filtering to combat today's sophisticated attacks.

GravityZone Email Security is a cloud-based solution that helps MSPs protect customers' emails from spam, phishing and malware as well as advanced and targeted attacks. It prevents impersonation and fraud, leveraging multiple leading security engines and behavioural technologies to analyze incoming and outgoing email content, URLs and attachments. The Bitdefender Sandbox capability available with Email Security, built by in-house machine learning and behavioral heuristic models, is a powerful forensic tool. Suspicious files are analyzed in-depth by detonating payloads in Bitdefender's cloud platform to observe malware behavior by simulating a 'real target' so that the malware will act as it would in the wild. Post analysis, appropriate actions are taken to effectively neutralize the threat.

With GravityZone Email Security you can:

- **Gain Unparalleled Protection with Multiple Scanning Engines**
Multiple scanning engines and behavioral technologies protect your customers against spam, viruses, phishing attacks, ransomware, malware, and other email-borne threats
- **Stop CEO Fraud and Business Email Compromise**
Detects threats that don't involve malware, such as credential phishing and imposter emails.
- **Protect Microsoft 365 Customers**
Seamless integration with Microsoft 365 via an Azure connector simplifies deployment and management of Microsoft 365 mailboxes to keep your customers safe from email attacks and you can also report spam and phishing emails through Microsoft Outlook.
- **Simplify your MSP Security Suite**
Streamline tasks with multitenancy, consolidated user management and monthly licensing for endpoint and email security.

At-a-Glance

GravityZone Email Security is a multi-layered, cloud-based email security product, for organizations and MSPs, that protects all email service providers and supports hybrid environments using Exchange on-premises, Microsoft365, Exchange Online, or Gmail.

Key Benefits

- Keeps customers' emails safe
- Helps support compliance for regulations such as GDPR, PCI, HIPA
- Quick and easy deployment
- Compatible with all email service providers
- Fully supports hybrid environments
- Flexible monthly licensing that allows you to scale up or down according to your needs

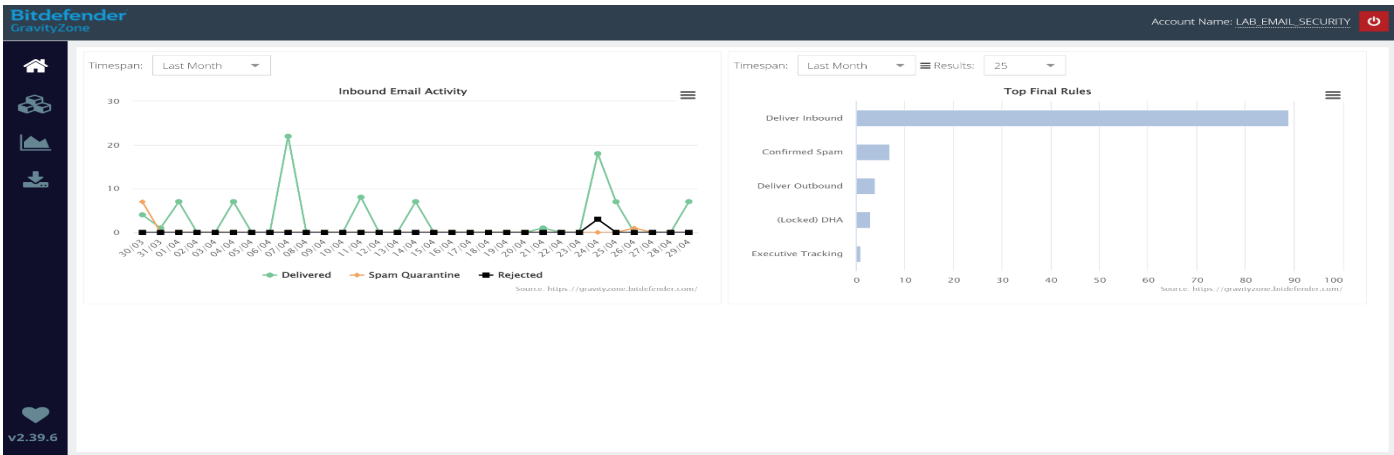

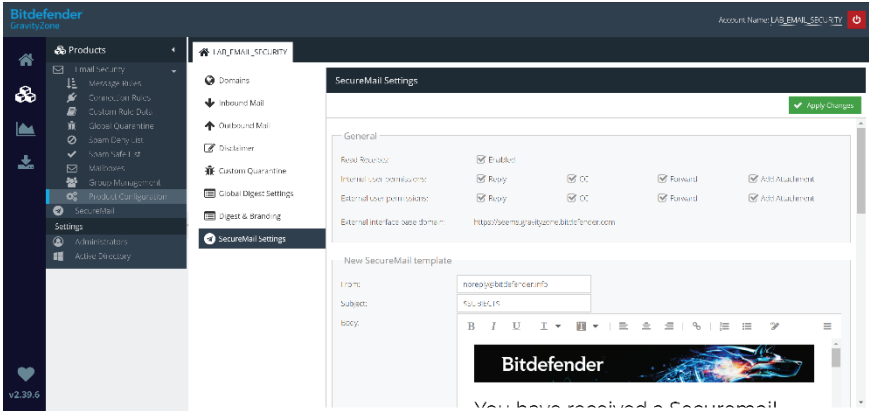

"I'm all about streamlining and making things consistent across the board. So, Bitdefender was a great opportunity to consolidate and manage our endpoint and email security across our physical and Azure cloud environments from one console."

Email security designed for efficiency and ultimate protection

With GravityZone Email Security traditional pattern, message attribute and characteristic matching are complemented by algorithmic analysis for ultimate threat detection without impacting accuracy.

A sophisticated policy engine allows IT administrators to customize exactly how emails flow in and out of the organization. The engine can inspect all aspects of email, including size, content, attachments, headers, senders, and recipients, and take appropriate actions to deliver, quarantine, company quarantine, re-route, notify, or reject the message.
